

FOR Segurança Eletrônica and EXPOSEC: A long-standing partnership

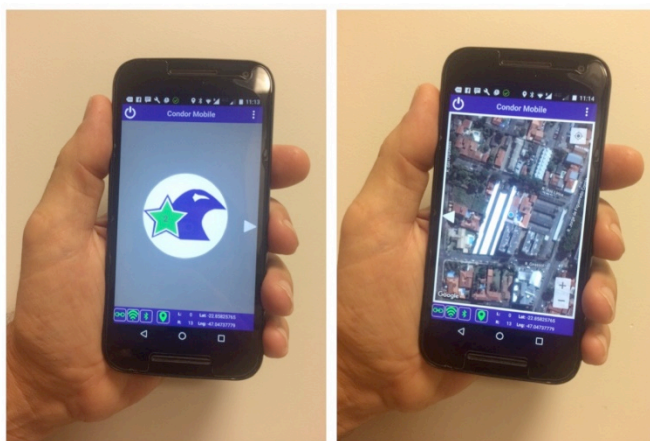

FOR Segurança Eletrônica operates in the development of software for monitoring centers and electronic security solutions for large environments such as shopping centers and large companies and is confirmed for the **20th edition** of **EXPOSEC | International Security Fair**, which will be held **from May 23 to 25, 2017, at the São Paulo Expo** in São Paulo and promises to be another success for the public and business.

"EXPOSEC is the main security event in the country. Our clients visit us at the fair in search of news. The contacts we have developed during the event provide us with business all year round. The exchange of experience with visitors results in new developments, always following the market trends", says José D. Favoretto Jr., co-owner partner of the company.

The highlight of this edition will be Condor Software, composed of 4 fully integrated modules (CondorAlarme, CondorCFTV, CondorMaps and CondorWeb), with functions necessary for an excellent monitoring service.

The CondorAlarme is the central element of the electronic monitoring solution, which in itself allows the reception of the events of the main alarm panels of the market.

CondorWeb, integrated with CondorAlarme, has a portal on www.monitoramento24h.net.br/suaempresa that enables the company to publish the clients' events on the internet. The portal also has management functionality that allows the control of access of the clients to the reports, being able to block / unblock. It also allows the sending of e-mails with different contents (communications, offers, etc.), with individual coverage, for a group or for everyone.

CondorCFTV, integrated with CondorAlarme, allows the visualization of the images of the customers' CCTV systems. The preview can be activated manually or automatically from an event received in the CondorAlarme. CondorAlarme automatically manages the reception of the events, enabling the visualization of the images of the clients when they exist. It allows the visualization and recording of the images of up to 5 simultaneous clients, allowing the operator greater control in the peak times. The action of the access to the images is automatically recorded in the report of occurrence of the CondorAlarme allowing the best tracking of the procedures

performed. The CondorCFTV automatically accesses the main equipment of the market (cameras and DVRs), being constantly updated.

The CondorMaps, integrated to the CondorAlarme, allows the visualization of each client in the Google map, whose GPS coordinate is calculated by the CondorAlarme through the register of the address of each client. In addition to the identification on the map, there is visual color-coded recognition of customer status as: armed, disarming, not monitored by arming and disarming, and event under treatment. CondorMaps is a useful tool for general location visualization of all your clients, helping the operator to optimize the sending of scouts.

EXPOSEC 2017 will bring together **800 exhibiting brands** that will bring the main trends for the sector as monitoring and perimeter centers, closed circuits, access control, fire detection, security locks, industrial intelligence, electronic and residential security, identification and surveillance systems, transportation of valuables and transport vehicles, armored vehicles and weapons.
